Interactive Map

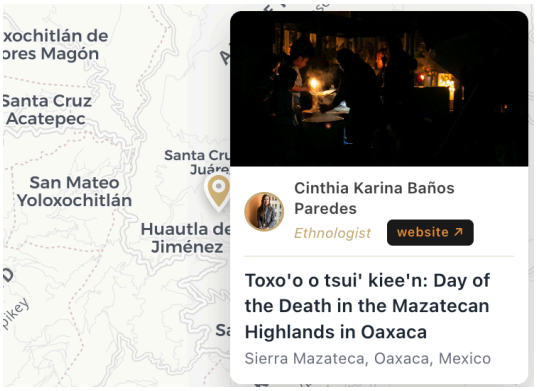

The main goal is to embed a Google Maps platform covering the world.

Requirements:

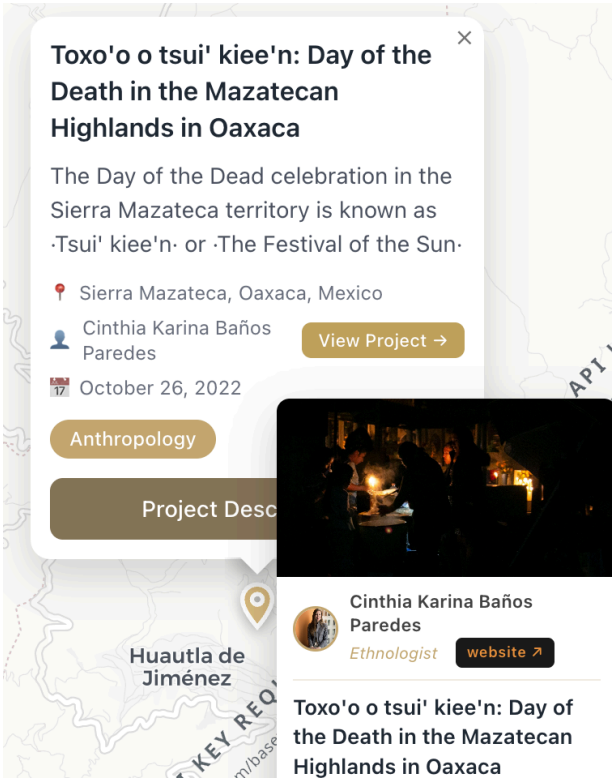

1 Icons

At the moment of clicking, the user opens a preview of the project,

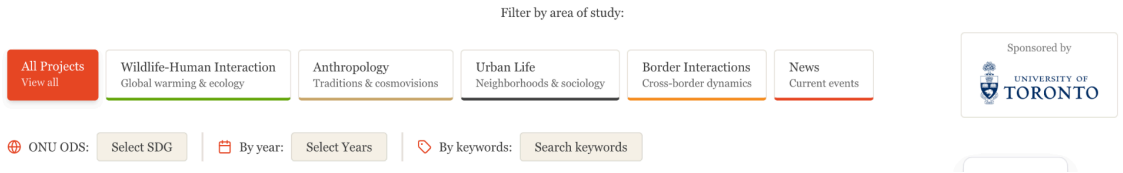

-Icon at the right of the name stating author´s adherence: The Globe and Mail, University of Toronto, The Image Center, etc.

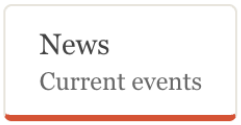

-A blue mark, stating the project has been curated and the info of the project is reliable.

2 Filters

1 ONU SDGs, keywords, time, and 5 main categories: Wildlife-Human Interaction, Anthropology, Cross border interactions, and the most important one, news.

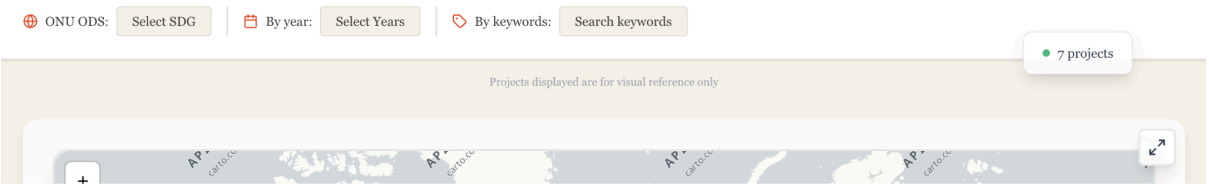

At the moment of displaying news, the map must get a light red cap over specific regions, so for example, now with the political situation in Gaza, that region would be remarked.

-The admin can change the region colored in red. An alternative AI model that color in red depending on outer newspaper trends, can be considered.

3 Frame

2 The map must be easy to use, users don´t need to go from buttons to the map, it must be integrated so there is no space between both.

Users must be able to reach buttons and map at the same time. The map must not be on a “frame” but must occupy from below the filters to the bottom of the page.

4 Zoom

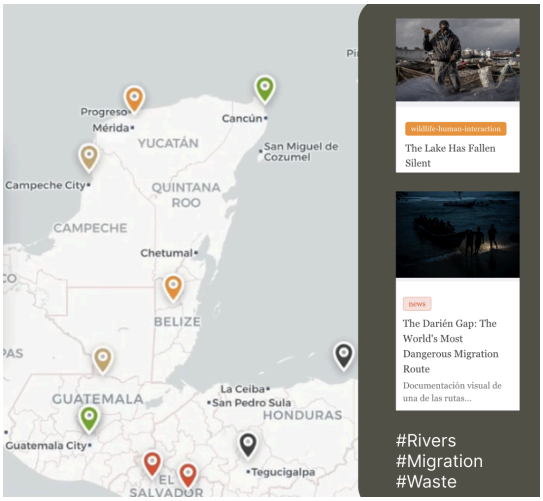

The Zoom In Zoom out must be easy to engage with fingers, though for a mac computer or cellphone. A couple of buttons must be added to make the Zoom easier.

5 Borders

Add an extra button that remarks the country's borders. This will be helpful to understand the migration process and state to state policymaking.

6 Dropdown

There must be a dropdown bar, by clicking a button, from the right side of the page appears a bar with results from the filters.

7 Research Button

6 Researchers button, upon click, the map will display academics and journalists who work in determined cities. Color of icons are black for academics & orange for journalists. The filter remain the same, the only change is that researchers instead of projects will be displayed. For users to know if it is in researchers or projects mode, the button must change color from black to orange.

8 Mercator Map

A button that lets you change Mercator-Real size of the world conserving the Google Maps format.
